ZHANGJIE CAO

Stanford University AI Lab, Room 240

650-441-4422 | caozhangjie14@gmail.com | caozhangjie.github.io | caozhangjie

Education

Stanford University
PH.D. OF COMPUTER SCIENCE

U.S.A
September 2018 - Now

Tsinghua University
BACHELOR OF SOFTWARE ENGINEERING
- GPA: 91/100

China
September 2014 - July 2018

Research Experience

National Lab for Big Data Systems, School of Software, Tsinghua University *China*
Mentor: Mingsheng Long

PROJECTS ON DEEP LEARNING TO HASH *Jan. 2016 - Nov. 2017*

- Proposed a new cross-modal retrieval scenario without explicit relationship and a Transitive Hashing Network to solve it.
- Proposed HashNet with binary output and enable optimization of sign activation function by continuation method.
- Proposed Transfer Adversarial Hashing the first model focusing on cross-domain retrieval within Hamming Radius 2.
- Proposed Deep Focal Hashing (DFH) with priority loss to address the class imbalance and easy-hard imbalance problems.

National Lab for Big Data Systems, School of Software, Tsinghua University *China*
Mentor: Mingsheng Long

PROJECTS ON DOMAIN ADAPTATION *Sept. 2016 - June. 2018*

- Proposed a Multi-Adversarial Domain Adaptation to train multiple adversaries weighted by probability over classes.
- Proposed a new partial domain adaptation setting with source label space includes target and a selective adversarial network with multiple adversarial networks and both instance-level and class-level weights to address it.
- Further proposed a single adversarial network architecture to address partial domain adaptation

Department of Computer Science and Lewis-Sigler Institute of Integrative Genomics, Princeton University *U.S.A*
Mentor: Olga Troyanskaya

PROJECT: ALGORITHMS USING DEEP LEARNING FOR NONCODING VARIANTS RECOGNITION *July. 2016 - August. 2016*

- Designed new architecture with multiple classifiers builded on each convolutional layers to exploit low level features and solved the gradient vanishing problem of the original network.
- Considering the relation of different chromatin features (labels), I improved the classifying layer with low rank technical.
- The new architecture outperformed existing methods under standard evaluation criteria such as AUC of PR Curve and ROC Curve.

Department of Computer Science, The University of Texas at Austin *U.S.A*
Mentor: Qixing Huang

PAPER: 3D OBJECT CLASSIFICATION VIA SPHERICAL PROJECTIONS *Feb. 2017 - May. 2017*

- Proposed a spherical representation leveraging depth variation and contour information for 3D objects.
- Developed deep neural networks composing of two parts for depth and contour representation respectively to classify 3D objects.
- Implemented Spherical Projection in caffe framework and carefully designed experiments to compare our method with state of the art methods under standard evaluation criteria on large scale 3D Recognition Dataset.
- Wrote the first version of the paper under the supervision of my mentor.

Department of Computer Science, Stanford University *U.S.A*
Mentor: Juan Carlos Niebles

PROJECT: VIDEO DOMAIN ADAPTATION *Nov. 2018 - March 2019*

- Proposed cross-domain action recognition which recognizes actions of an unlabeled target domain with a labeled related source domain.
- Designed a co-attention module and a temporal-aligned adaptation module for global action distribution matching between domains.
- The method achieved significant performance and the paper has been submitted to ICCV 2019.

Department of Computer Science, Stanford University *U.S.A*
Mentor: Juan Carlos Niebles

PROJECT: INTENT PREDICTION *Oct. 2018 - March 2019*

- Address pedestrian intent prediction by modeling the relation between pedestrians and environment objects with spatiotemporal graph.
- The method achieved good results on real-world driving datasets and the paper has been submitted to ICCV 2019.

Department of Computer Science, Stanford University *U.S.A*
Mentor: Stefano Ermon

PROJECT: ALIGNFLOW: CYCLE CONSISTENT LEARNING FROM MULTIPLE DOMAINS VIA NORMALIZING FLOWS *Oct. 2018 - Now*

- Proposed to use normalizing flows in generative model, which is flexible in loss (Adversarial training or Maximum likelihood estimation).
- AlignFlow guarantees exact cycle consistency in mapping datapoints from one domain to another.
- The paper has been submitted to NeurIPS 2019.

Department of Computer Science, Stanford University *U.S.A*
Mentor: Stefano Ermon

PROJECT: OPEN SET SEMI-SUPERVISED LEARNING *Jan. 2019 - May 2019*

- Proposed open set semi-supervised learning where the unlabeled data containing outlier data within classes not included labeled data.
- Investigated the influence of previous semi-supervised work from different parts of outlier data.
- Designed a method smartly combining previous semi-supervised works based on the analysis .
- The paper has been submitted to NeurIPS 2019.

Department of Computer Science, Stanford University *U.S.A*
Mentor: Amir R. Zamir

PROJECT: CROSS-TASK CONSISTENCY *April 2019 - May 2019*

- Proposed a flexible and fully computational framework for learning with consistency across an arbitrary dictionary of tasks.
- Proved that consistency constraints can improve the generalization power of the model to out-of-distribution data.
- The paper has been submitted to NeurIPS 2019.

Honors & Awards

2015	**National Scholarship**, Tsinghua University	*China*
2015	**Best Project Award**, Course of Architecture of Computer and Network	*China*
2016	**Qualcomm Scholarship**, Tsinghua University	*China*
2018	**Rank 3 in Visual Domain Adaptation Challenge (VisDA-2018)**, ECCV2018 Workshop Challenge (http://ai.bu.edu/visda-2018)	*Munich, Germany*
2019	**Outstanding reviewers**, CVPR 2019	*Long Beach, CA, USA*

Skills

Programming	Proficient in Python, C/C++ , LaTeX and Matlab; Familiar with Lua, Bash, JAVA and Haskell
Framework	Proficient in Caffe and PyTorch; Familiar with Torch with Lua and Tensorflow
Languages	English, Chinese (native speaker)
